This information bulletin is published to guide applicants through a streamlined permitting process for solar photovoltaic (PV) projects 10 kW in size or smaller. This bulletin provides information about submittal requirements for plan review, required fees and inspections.

1. Approval Requirements

The following permits are required to install a solar PV system with a maximum power output of 10 kW or less:

a) Electrical Permit

Planning review IS NOT required for solar PV installations of this size.
Fire Department approval IS NOT required for solar PV installations of this size.

2. Submittal Requirements

a) Completed permit application form. This permit application form can be downloaded here. You may apply for a complying Solar Photovoltaic Installation online at https://aca.accela.com/lancaster/.

b) Demonstrate compliance with the Eligibility Checklist for expedited permitting, Toolkit Document #2.

*If standard electrical plans are not provided for use, an electrical plan should be submitted that includes the following.*

- Locations of main service or utility disconnect
- Total number of modules, number of modules per string and the total number of strings
- Make and model of inverter(s) and/or combiner box if used
- One-line diagram of system
- Specify grounding/bonding, conductor type and size, conduit type and size and number of conductors in each section of conduit
- If batteries are to be installed, include them in the diagram and show their locations and venting
- Equipment cut sheets including inverters, modules, AC and DC disconnects, combiners and wind generators
- Labeling of equipment as required by CEC, Sections 690 and 705
- Site diagram showing the arrangement of panels on the roof or ground, north arrow, lot dimensions and the distance from property lines to adjacent buildings/structures (existing and proposed)

d) A roof plan showing roof layout, PV panels and the following fire safety items: approximate location of roof access point, location of code-compliant access pathways, PV system fire classification and the locations of all required labels and markings. Examples of clear path access pathways are available in the State Fire Marshal Solar PV Installation Guide.

e) Completed expedited Structural Criteria, Toolkit Document #5, along with required documentation.
For non-qualifying systems, provide structural drawings and calculations stamped and signed by a California-licensed Civil or Structural Engineer, along with the following information.

- The type of roof covering and the number of roof coverings installed
- Type of roof framing, size of members and spacing
- Weight of panels, support locations and method of attachment
- Framing plan and details for any work necessary to strengthen the existing roof structure
- Site-specific structural calculations
- Where an approved racking system is used, provide documentation showing manufacture of the rack system, maximum allowable weight the system can support, attachment method to the roof or ground and product evaluation information or structural design for the rack system

3. Plan Review

Permit applications and plans can be submitted to Building and Safety in person at 44933 Fern Avenue, Lancaster 93534, and electronically through the following website: https://aca.accela.com/lancaster/.

Permits not approved “over the counter” will normally be reviewed in one business day.

4. Fees

Small Solar Photovoltaic System Plan Check and Inspection: $199
Travel and Documentation: $27
Permit Issuance: $8
Total: $234
Systems with battery storage will pay an additional 1-hour Inspection Fee of $160

5. Inspections

Once all permits to construct the solar installation have been issued and the system has been installed, it must be inspected before final approval is granted for the solar system. On-site inspections are scheduled online at https://aca.accela.com/lancaster/. Inspection requests are typically scheduled for the next business day. If next business day is not available, inspection should happen within a five-day window.

Permit holders must be prepared to show conformance with all technical requirements in the field at the time of inspection. The inspector will verify that the installation is in conformance with applicable code requirements and with the approved plans. An approved ladder must be present at the site for the inspector’s use.

The Inspection Guide, Toolkit Document #6, provides an overview of common points of inspection that the applicant should be prepared to show compliance. If not available, common checks include the following.

- Number of PV modules and model number match plans and specification sheets number match plans and specification sheets.
- Array conductors and components are installed in a neat and workman-like manner.
- PV array is properly grounded.
- Electrical boxes are accessible and connections are suitable for environment.
- Array is fastened and sealed according to attachment detail.
- Conductor ratings and sizes match plans.
- Appropriate signs are properly constructed, installed and displayed, including the following.
  - Sign identifying PV power source system attributes at DC disconnect
  - Sign identifying AC point of connection
  - Sign identifying switch for alternative power system
• Equipment ratings are consistent with application and installed signs on the installation, including the following.
  – Inverter has a rating as high as max voltage on PV power source sign.
  – DC-side overcurrent circuit protection devices (OCPDs) are DC rated at least as high as max voltage on sign.
  – Switches and OCPDs are installed according to the manufacturer’s specifications (i.e., many 600VDC switches require passing through the switch poles twice in a specific way).
  – 600VDC switches require passing through the switch poles twice in a specific way).
  – Inverter is rated for the site AC voltage supplied and shown on the AC point of connection sign.
  – OCPD connected to the AC output of the inverter is rated at least 125% of maximum current on sign and is no larger than the maximum OCPD on the inverter listing label.
  – Sum of the main OCPD and the inverter OCPD is rated for not more than 120% of the bus bar rating.

6. Departmental Contact Information

For additional information regarding this permit process, please consult our departmental website, or contact Building and Safety at (661) 723-6144.
## Eligibility Checklist for Expedited Solar Photovoltaic Permitting for One- and Two-Family Dwellings

### GENERAL REQUIREMENTS

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. System size is 10 kW AC CEC rating or less</td>
<td></td>
<td></td>
</tr>
<tr>
<td>B. The solar array is roof-mounted on one- or two-family dwelling or accessory structure</td>
<td></td>
<td></td>
</tr>
<tr>
<td>C. The solar panel/module arrays will not exceed the maximum legal building height</td>
<td></td>
<td></td>
</tr>
<tr>
<td>D. Solar system is utility interactive and without battery storage</td>
<td></td>
<td></td>
</tr>
<tr>
<td>E. Permit application is completed and attached</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### ELECTRICAL REQUIREMENTS

No more than four photovoltaic module strings are connected to each Maximum Power Point Tracking (MPPT) input where source circuit fusing is included in the inverter

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
<tbody>
<tr>
<td>1) No more than two strings per MPPT input where source circuit fusing is not included</td>
<td></td>
<td></td>
</tr>
<tr>
<td>2) Fuses (if needed) are rated to the series fuse rating of the PV module</td>
<td></td>
<td></td>
</tr>
<tr>
<td>3) No more than one noninverter-integrated DC combiner is utilized per inverter</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

A. For central inverter systems: No more than two inverters are utilized
B. The PV system is interconnected to a single-phase AC service panel of nominal 120/220 Vac with a bus bar rating of 225 A or less
C. The PV system is connected to the load side of the utility distribution equipment
D. A Solar PV Standard Plan and supporting documentation is completed and attached

### STRUCTURAL REQUIREMENTS

A. A completed Structural Criteria and supporting documentation is attached (if required)

### FIRE SAFETY REQUIREMENTS

<table>
<thead>
<tr>
<th>Requirement</th>
<th>Y</th>
<th>N</th>
</tr>
</thead>
<tbody>
<tr>
<td>A. Clear access pathways provided</td>
<td></td>
<td></td>
</tr>
<tr>
<td>B. Fire classification solar system is provided</td>
<td></td>
<td></td>
</tr>
<tr>
<td>C. All required markings and labels are provided</td>
<td></td>
<td></td>
</tr>
<tr>
<td>D. A diagram of the roof layout of all panels, modules, clear access pathways and approximate locations of electrical disconnecting means and roof access points is completed and attached</td>
<td></td>
<td></td>
</tr>
</tbody>
</table>

### Notes:

1. *These criteria are intended for expedited solar permitting process.*
2. *If any items are checked NO, revise design to fit within Eligibility Checklist, otherwise permit application may go through standard process.*
SCAPE: Use this plan ONLY for utility-interactive central/string inverter systems not exceeding a system AC inverter output rating of 10kW on the roof of a one- or two-family dwelling or accessory structure. The photovoltaic system must interconnect to the load side of a single-phase AC service panel of nominal 120/240Vac with a bus bar rating of 225A or less. This plan is not intended for bipolar systems, hybrid systems or systems that utilize storage batteries, charge controllers, trackers, more than two inverters or more than one DC combiner (noninverter-integrated) per inverter. Systems must be in compliance with current California Building Standards Codes and local amendments of the authority having jurisdiction (AHJ). Other Articles of the California Electrical Code (CEC) shall apply as specified in 690.3.

MANUFACTURER’S SPECIFICATION SHEETS MUST BE PROVIDED for proposed inverter, modules, combiner/junction boxes and racking systems. Installation instructions for bonding and grounding equipment shall be provided, and local AHJs may require additional details. Listed and labeled equipment shall be installed and used in accordance with any instructions included in the listing or labeling (CEC 110.3). Equipment intended for use with PV system shall be identified and listed for the application (CEC 690.4[D]).

Job Address: ______________________________________________  Permit #: ________________________
Contractor/ Engineer Name: _________________________________  License # and Class: ________________
Signature: _______________________________ Date: ___________  Phone Number: ___________________
Total # of Inverters installed: ____________ (If more than one inverter, complete and attach the “Supplemental Calculation Sheets” and the “Load Center Calculations” if a new load center is to be used.)

Inverter 1 AC Output Power Rating: _______________________ Watts
Inverter 2 AC Output Power Rating (if applicable): ____________ Watts
Combined Inverter Output Power Rating: ___________________ ≤ 10,000 Watts

Location Ambient Temperatures (Check box next to which lowest expected temperature is used):

1) ☐ Lowest expected ambient temperature for the location ( ) = Between -1 to -5 °C
☐ Lowest expected ambient temperature for the location ( ) = Between -6 to -10 °C
Average ambient high temperature ( ) = 47 °C

Note: For a lower or a higher , use the Comprehensive Standard Plan

DC Information:

Module Manufacturer: _______________________________  Model: _______________________________

2) Module (from module nameplate): _____Volts 3) Module (from module nameplate): _____Amps

4) Module DC output power under standard test conditions (STC) = ________ Watts (STC)
5) DC Module Layout

Identify each source circuit (string) for inverter 1 shown on the roof plan with a Tag (e.g., A, B, C, ...)

<table>
<thead>
<tr>
<th>Number of modules per source circuit for inverter 1</th>
</tr>
</thead>
<tbody>
<tr>
<td>Identify, by tag, which source circuits on the roof are to be paralleled (if none, put N/A)</td>
</tr>
<tr>
<td>Combiner 1:</td>
</tr>
<tr>
<td>Combiner 2:</td>
</tr>
</tbody>
</table>

Total number of source circuits for inverter 1:

6) Are DC/DC Converters used?  □ Yes  □ No  If No, skip to STEP 7. If Yes, enter info below.

DC/DC Converter Model #: ____________________________
Max DC Output Current: ____________________________ Amps
Max # of DC/DC Converters in an Input Circuit: __________________
DC/DC Converter Max DC Input Voltage: ______Volts
Max DC Output Voltage: ____________________Volts
DC/DC Converter Max DC Input Power: ______ Watts

7) Max. System DC Voltage – Use A1 or A2 for systems without DC/DC converters, and B1 or B2 with DC/DC converters.

□ A1. Module (STEP 2) = ______ x # in series (STEP 5) ______ x 1.12 (If -1 ≤ ≤ -5°C, STEP 1) = ______ V
□ A2. Module (STEP 2) = ______ x # in series (STEP 5) ______ x 1.14 (If -6 ≤ ≤ -10°C, STEP 1) = ______ V

<table>
<thead>
<tr>
<th>Table 1. Maximum Number of PV Modules in Series Based on Module Rated VOC for 600 Vdc Rated Equipment (CEC 690.7)</th>
</tr>
</thead>
<tbody>
<tr>
<td>Max. Rated Module VOC (*1.12) (Volts)</td>
</tr>
<tr>
<td>Max. Rated Module VOC (*1.14) (Volts)</td>
</tr>
<tr>
<td>Max # of Modules for 600 Vdc</td>
</tr>
</tbody>
</table>

Use for DC/DC converters. The value calculated below must be less than DC/DC converter max DC input voltage (STEP #6).

□ B1. Module (STEP 2) ______ x # of modules per converter (STEP 6) ______ x 1.12 (If -1 ≤ ≤ -5°C, STEP 1) = ______ V
□ B2. Module (STEP 2) ______ x # of modules per converter (STEP 6) ______ x 1.14 (If -6 ≤ ≤ -10°C, STEP 1) = ______ V

<table>
<thead>
<tr>
<th>Table 2. Largest Module VOC for Single-Module DC/DC Converter Configurations (With 80V AFCI Cap) (CEC 690.7 and 690.11)</th>

</thead>
<tbody>
<tr>
<td>Max. Rated Module VOC (*1.12) (Volts)</td>
</tr>
<tr>
<td>Max. Rated Module VOC (*1.14) (Volts)</td>
</tr>
<tr>
<td>DC/DC Converter Max DC Input (STEP #6) (Volts)</td>
</tr>
</tbody>
</table>

8) Maximum System DC Voltage from DC/DC Converters to Inverter – Only required if Yes in STEP 6

Maximum System DC Voltage = ___________________ Volts

9) Maximum Source Circuit Current

Is Module below 9.6 Amps (STEP 3)?  □ Yes  □ No (if No, use Comprehensive Standard Plan)
10) Sizing Source Circuit Conductors
Source Circuit Conductor Size = Min. #10 AWG copper conductor, 90°C wet (USE-2, PV Wire, XHHW-2, THWN-2, RHW-2)
For up to 8 conductors in roof-mounted conduit exposed to sunlight at least ½” from the roof covering (CEC 310)
Note: For over 8 conductors in the conduit or mounting height of lower than ½“from the roof, use Comprehensive Plan.

11) Are PV source circuits combined prior to the inverter? □ Yes □ No
If No, use Single Line Diagram 1 with Single Line Diagram 3 and proceed to STEP 13.
If Yes, use Single Line Diagram 2 with Single Line Diagram 4 and proceed to STEP 12.
Is source circuit OCPD required? □ Yes □ No
Source circuit OCPD size (if needed): 15 Amps

12) Sizing PV Output Circuit Conductors – If a combiner box will NOT be used from [STEP 11],
Output Circuit Conductor Size = Min. #6 AWG copper conductor

13) Inverter DC Disconnect
Does the inverter have an integrated DC disconnect? □ Yes □ No
If yes, proceed to STEP 14.
If no, the external DC disconnect to be installed is rated for ______ Amps (DC) and ______ Volts (DC)

14) Inverter information
Manufacturer: __________________________      Model: __________________________
Max. Continuous AC Output Current Rating: ______Amps
Integrated DC Arc-Fault Circuit Protection? □ Yes □ No
Grounded or Ungrounded System: □ Grounded □ Ungrounded

15) Sizing Inverter Output Circuit Conductors and OCPD
Inverter Output OCPD rating = ______ Amps (Table 3)
Inverter Output Circuit Conductor Size = ______ AWG (Table 3)

<table>
<thead>
<tr>
<th>Inverter Continuous Output Current Rating (Amps) (STEP#14)</th>
<th>12</th>
<th>16</th>
<th>20</th>
<th>24</th>
<th>28</th>
<th>32</th>

<th>40</th>
<th>48</th>
</tr>
</thead>
<tbody>
<tr>
<td>Minimum OCPD Size (Amps)</td>
<td>15</td>
<td>20</td>
<td>25</td>
<td>30</td>
<td>35</td>
<td>40</td>
<td>45</td>
<td>50</td>
<td>60</td>
</tr>
<tr>
<td>Minimum Conductor Size (AWG, 75°C, Copper)</td>
<td>14</td>
<td>12</td>
<td>10</td>
<td>10</td>
<td>8</td>
<td>8</td>
<td>6</td>
<td>6</td>
<td>6</td>
</tr>
</tbody>
</table>
Integrated DC Arc-Fault Circuit Protection? □ Yes □ No (If No is selected, Comprehensive Standard Plan)
Grounded or Ungrounded System? □ Grounded □ Ungrounded
16) Point of Connection to Utility
Only load side connections are permitted with this plan. Otherwise, use Comprehensive Standard Plan.

Is the PV OCPD positioned at the opposite end from input feeder location or main OCPD location? □ Yes □ No
If Yes, circle the Max Combined PV System OCPD(s) at 120% value as determined from STEP 15 (or STEP S20), bus bar Rating, and Main OCPD as shown in Table 4.
If No, circle the Max Combined PV System OCPD(s) at 100% value as determined from STEP 15 (or STEP S20), bus bar Rating, and Main OCPD as shown in Table 4.
Per 705.12(D)(2): [Inverter output OCPD size [STEP #15 or S20] + Main OCPD Size] ≤ [bus size × (100% or 120%)]

<table>
<thead>
<tr>
<th>Bus bar Rating</th>

<td>25</td>
<td>0</td>
</tr>
</tbody>
</table>

*This value has been lowered to 60 A from the calculated value to reflect 10kW AC size maximum.
Reduction of the main breaker is not permitted with this plan. Otherwise, use Comprehensive Standard Plan.

17 & 18 & 19) Labels and Grounding and Bonding
This content is covered by the labels on Page 4 and the Single Line Diagram(s). For background information, refer to the Comprehensive Standard Plan.
Solar PV Standard Plan – Simplified
Central/String Inverter Systems for One- and Two-Family Dwellings

Markings

CEC Articles 690 and 705 and CRC Section R331 require the following labels or markings be installed at these components of the photovoltaic system:

- **WARNING**
  - INVERTER OUTPUT CONNECTION; DO NOT RELOCATE THIS OVERCURRENT DEVICE
  - CEC 705.12(D)(7)
  - [Not required if panelboard is rated not less than sum of ampere ratings of all overcurrent devices supplying it]

- **WARNING**
  - ELECTRIC SHOCK HAZARD. THE DC CONDUCTORS OF THIS PHOTOVOLTAIC SYSTEM ARE UNGROUNDED AND MAY BE ENERGIZED
  - CEC 690.35(F)
  - [Only required for ungrounded systems]

- **WARNING**
  - PHOTOVOLTAIC POWER SOURCE
  - CRC R331.2 and CFC 605.11.1
  - [Marked on junction/combiner boxes and conduit every 10']

- **WARNING**
  - DUAL POWER SOURCES
  - SECOND SOURCE IS PHOTOVOLTAIC SYSTEM
  - RATED AC OUTPUT CURRENT - ___AMPS AC
  - NORMAL OPERATING VOLTAGE ___VOLTS
  - CEC 690.54 & CEC 705.12(D)(4)

- **WARNING**
  - ELECTRIC SHOCK HAZARD
  - IF A GROUND FAULT IS INDICATED, NORMALLY GROUNDED CONDUCTORS MAY BE UNGROUNDED AND ENERGIZED
  - CEC 690.5(C)
  - [Normally already present on listed inverters]

- **WARNING**
  - ELECTRIC SHOCK HAZARD
  - DO NOT TOUCH TERMINALS
  - TERMINALS ON BOTH LINE AND LOAD SIDES MAY BE ENERGIZED IN THE OPEN POSITION
  - CEC 690.17

- **PV SYSTEM DC DISCONNECT**
  - RATED MAX POWER-POINT CURRENT- ___ADC
  - RATED MAX POWER-POINT VOLTAGE- ___VDC
  - SHORT CIRCUIT CURRENT- ___ADC
  - MAXIMUM SYSTEM VOLTAGE- ___VDC
  - CEC 690.53

Code Abbreviations:
- California Electrical Code (CEC)
- California Residential Code (CRC)
- California Fire Code (CFC)

Informational note: ANSI Z535.4 provides guidelines for the design of safety signs and labels for application to products. A phenolic plaque with contrasting colors between the text and background would meet the intent of the code for permanency. No type size is specified, but 20 point (3/8”) should be considered the minimum.

CEC 705.12 requires a permanent plaque or directory denoting all electric power sources on or in the premises.

S8) Maximum System DC Voltage from DC/DC Converters to Inverter – Only required if Yes in STEP S6
Maximum System DC Voltage = _________________ Volts

S9) Maximum Source Circuit Current
Is Module ISC below 9.6 Amps (STEP S3)?  □ Yes  □ No  (if No, use Comprehensive Standard Plan)

S10) Sizing Source Circuit Conductors:
Source Circuit Conductor Size = Min. #10 AWG copper conductor, 90°C wet (USE-2, PV Wire, XHHW-2, THWN-2, RHW-2)
For up to 8 conductors in roof-mounted conduit exposed to sunlight at least ½” from the roof covering (CEC 310)
Note: For over 8 conductors in the conduit or mounting height of lower than ½“from the roof, use Comprehensive Plan.

S11) Are PV source circuits combined prior to the inverter?  □ Yes  □ No
If No, use Single Line Diagram 1 with Single Line Diagram 3 and proceed to STEP S13.
If Yes, use Single Line Diagram 2 with Single Line Diagram 4 and proceed to STEP S12.
Is source circuit OCPD required?  □ Yes  □ No
Source circuit OCPD size (if needed): 15 Amps

S12) Sizing PV Output Circuit Conductors – If a Combiner box will NOT be used from [STEP S11],
Output Circuit Conductor Size = Min. #6 AWG copper conductor

S13) Inverter DC Disconnect
Does the inverter have an integrated DC disconnect?  □ Yes  □ No  If yes, proceed to STEP S14.
If No, the external DC disconnect to be installed is rated for ______ Amps (DC) and ______ Volts (DC)
S14) Inverter information:
Manufacturer: _________________________________   Model: _________________________________
Max. Continuous AC Output Current Rating: ______ Amps
Integrated DC Arc-Fault Circuit Protection?   ☐ Yes   ☐ No (If No is selected, Comprehensive Standard Plan)
Grounded or Ungrounded System:  ☐ GROUNDED   ☐ UNGROUNDED

AC Information:

S15) Sizing Inverter Output Circuit Conductors and OCPD:
Inverter Output OCPD rating = ______ Amps (Table 3)
Inverter Output Circuit Conductor Size = ______ AWG (Table 3)

<table>

Load Center Calculations
(Omit if a load center will not be installed for PV OCPDs)

S20) Load Center Output:
Calculate the sum of the maximum AC outputs from each inverter.
Inverter #1 Max Continuous AC Output Current Rating[STEP S14]  ______ × 1.25 = ________ Amps
Inverter #2 Max Continuous AC Output Current Rating[STEP S14]  ______ × 1.25 = ________ Amps
Total inverter currents connected to load center (sum of above)  ________ Amps

Conductor Size: ________ AWG
Overcurrent Protection Device: ________ Amps
Load center bus bar rating: ________ Amps
The sum of the ampere ratings of overcurrent devices in circuits supplying power to a bus bar or conductor shall not exceed 120 percent of the rating of the bus bar or conductor.
Solar PV Standard Plan – Simplified

Items required: roof layout of all panels, modules, clear access pathways and approximate locations of electrical disconnecting means and roof access points.
SCOPE: Use this plan ONLY for systems using utility-interactive Microinverters or AC Modules (ACM) not exceeding a combined system AC inverter output rating of 10 kW, with a maximum of 3 branch circuits, one PV module per inverter and with PV module ISC maximum of 10-A DC, installed on a roof of a one- or two-family dwelling or accessory structure. The photovoltaic system must interconnect to a single-phase AC service panel of 120/240 Vac with service panel bus bar rating of 225 A or less. This plan is not intended for bipolar systems, hybrid systems or systems that utilize storage batteries, charge controllers or trackers. Systems must be in compliance with current California Building Standards Codes and local amendments of the authority having jurisdiction (AHJ). Other articles of the California Electrical Code (CEC) shall apply as specified in section 690.3.

MANUFACTURER’S SPECIFICATION SHEETS MUST BE PROVIDED for proposed inverters, modules, combiner/junction boxes and racking systems. Installation instructions for bonding and grounding equipment shall be provided and local AHJs may require additional details. Listed and labeled equipment shall be installed and used in accordance with any instructions included in the listing or labeling (CEC 110.3). Equipment intended for use with PV system shall be identified and listed for the application CEC 690.4(D).

Applicant and Site Information

Job Address: ___________________________________________ Permit #: __________________________
Contractor /Engineer Name: _______________________________ License # and Class: ____________________
Signature: _______________________________ Date: ___________ Phone Number: ____________________

1. General Requirements and System Information

☐ Microinverter
Number of PV modules installed: __________
Number of Microinverters installed: __________
☐ AC Module (ACM)
Number of ACMs installed: __________
Number of ACMs installed: __________

Note: Listed Alternating-Current Module (ACM) is defined in CEC 690.2 and installed per CEC 690.6

1.1 Number of Branch Circuits, 1, 2 or 3: __________

1.2 Actual number of Microinverters or ACMs per branch circuit: 1 _________ 2. _________ 3. _________

1.3 Total AC system power rating = (Total Number of Microinverters or ACMs) * (AC inverter power output)
    = _________ Watts

1.4 Lowest expected ambient temperature for this plan in Table 1: For -1 to -5°C use 1.12 or for -6 to -10°C use 1.14 correction factors.

1.5 Average ambient high temperature for this plan: = +47°C
Note: For lower expected ambient or higher average ambient high temperatures, use Comprehensive Standard Plan.

2. Microinverter or ACM Information and Ratings

Microinverters with ungrounded DC inputs shall be installed in accordance with CEC 690.35.

Microinverter or ACM Manufacturer: ______________________________
Model: ______________________________

2.1 Rated (continuous) AC output power: _________ Watts
2.2 Nominal AC voltage rating: __________ Volts

2.3 Rated (continuous) AC output current: __________ Amps

*If installing ACMs, skip [STEPS 2.4]*

2.4 Maximum DC input voltage rating: __________ Volts (limited to 79 V, otherwise use the Comprehensive Standard Plan)

2.5 Maximum AC output overcurrent protection device (OCPD) ___________ Amps

2.6 Maximum number of Microinverters or ACMs per branch circuit: ___________

3. PV Module Information

*If installing ACMs, skip to [STEP 4]*

PV Module Manufacturer: _______________________________________________

Model: _______________________________________________________________

Module DC output power under standard test conditions (STC) = __________ Watts

3.1 Module \( V_{oc} \) at STC (from module nameplate): __________ Volts

3.2 Module \( I_{sc} \) at STC (from module nameplate): ___________ Amps

3.3 Adjusted PV Module DC voltage at minimum temperature = [Table 1] __________ [cannot exceed Step 2.4]

</tbody>
</table>

†This plan limits the maximum system size to less than 10 kW, therefore the OCPD size is limited to 60 A. Reduction of Main Breaker is not permitted with this plan.
7. Grounding and Bonding

Check one of the boxes for whether system is grounded or ungrounded:  □ Grounded  □ Ungrounded

For Microinverters with a grounded DC input, systems must follow the requirements of GEC (CEC 690.47) and EGC (CEC 690.43).

For ACM systems and Microinverters with ungrounded a DC input follow the EGC requirements of (CEC 690.43).

8. Markings

Informational note: ANSI Z535.4 provides guidelines for the design of safety signs and labels for application to products. A phenolic plaque with contrasting colors between the text and background would meet the intent of the code for permanency. No type size is specified, but 20 point (3/8”) should be considered the minimum.

---

NOTE: CEC 705.10 requires a permanent plaque or directory denoting all electric power sources on or in the premises.

Items required: roof layout of all panels, modules, clear access pathways and approximate locations of electrical disconnecting means and roof access points.
STRUCTURAL CRITERIA FOR RESIDENTIAL FLUSH-MOUNTED SOLAR ARRAYS

1. ROOF CHECKS
   A. Visual Review/Contractor’s Site Audit of Existing Conditions:
      1) Is the roof a single roof without a reroof overlay?  ☐ Y  ☐ N
      2) Does the roof structure appear structurally sound, without signs of alterations
         or significant structural deterioration or sagging, as illustrated in Figure 1?  ☐ Y  ☐ N
   B. Roof Structure Data:
      1) Measured roof slope (e.g. 6:12):  _______:12
      2) Measured rafter spacing (center-to-center):  _______ inch
      3) Type of roof framing (rafter or manufactured truss):  ☐ Rafter  ☐ Truss

2. SOLAR ARRAY CHECKS
   A. Flush-mounted Solar Array:
      1) Is the plane of the modules (panels) parallel to the plane of the roof?  ☐ Y  ☐ N
      2) Is there a 2” to 10” gap between underside of module and the roof surface?  ☐ Y  ☐ N
      3) Modules do not overhang any roof edges (ridges, hops, gable ends, eaves)?  ☐ Y  ☐ N
   B. Do the modules plus support components weigh no more than:
      4 psf for photovoltaic arrays or 5 psf for solar thermal arrays?  ☐ Y  ☐ N
   C. Does the array cover no more than half of the total roof area (all roof planes)?  ☐ Y  ☐ N
   D. Are solar support component manufacturer’s project-specific completed worksheets,
      tables with relevant cells circled, or web-based calculator results attached?  ☐ Y  ☐ N
   E. Is a roof plan of the module and anchor layout attached? (see Figure 2)  ☐ Y  ☐ N
   F. Downward Load Check (Anchor Layout Check):
      1) Proposed anchor horizontal spacing (see Figure 2):  ____’ - ____” ft-in
      2) Horizontal anchor spacing per Table 1:  ____’ - ____” ft-in
      3) Is proposed anchor horizontal spacing less than Table 1 spacing?  ☐ Y  ☐ N
   G. Wind Uplift Check (Anchor Fastener Check):
      1) Anchor fastener data (see Figure 3):
         a. Diameter of lag screw, hanger bolt or self-drilling screw:  _______ inch
         b. Embedment depth of rafter:  _______ inch
         c. Number of screws per anchor (typically one):  _______
         d. Are 5/16” diameter lag screws with 2.5” embedment into the rafter
            used, OR does the anchor fastener meet the manufacturer’s guidelines?  ☐ Y  ☐ N

3. SUMMARY
   A. All items above are checked YES. No additional calculations are required.
   B. One or more items are checked NO. Attach project-specific drawings and calculations stamped and signed
      by a California-licensed Civil or Structural Engineer.

Solar support component manufacturer’s guidelines may be relied upon to ensure the array above the roof is properly designed, but manufacturer’s guidelines typically do NOT check to ensure that the roof itself can support the concentrated loads from the solar array. Table 1 assumes that the roof complied with the building code in effect at the time of construction, and places limits on anchor horizontal spacing to ensure that a roof structure is not overloaded under either downward loads or wind uplift loads. Note 4 below lists the basic assumptions upon which this table is based.

Table 1 Notes:

1. Anchors are also known as “stand-offs”, “feet”, “mounts” or “points of attachment”. Horizontal anchor spacing is also known as “cross-slope” or “east-west” anchor spacing (see Figure 2).
2. If anchors are staggered from row-to-row going up the roof, the anchor spacing may be twice that shown above, but no greater than 6'-0".
3. For manufactured plated wood trusses at slopes of flat to 6:12, the horizontal anchor spacing shall not exceed 4'-0" and anchors in adjacent rows shall be staggered.
4. This table is based on the following assumptions:
   - The roof structure conformed to building code requirements at the time it was built.
   - The attached list of criteria are met.
   - Mean roof height is not greater than 40 feet.
   - Roof sheathing is at least 7/16” thick oriented strand board or plywood. 1x skip sheathing is acceptable.
   - If the dwelling is in Wind Exposure B (typical urban, suburban or wooded areas farther than 500 yards from large open fields), no more than one of the following conditions apply:
     - The dwelling is located in a special wind region with design wind speed between 115 and 130 mph per ASCE 7-10, or
     - The dwelling is located on the top half of a tall hill, provided average slope steeper is less than 15%.
   - If the dwelling is In Wind Exposure C (within 500 yards of large open fields or grasslands), all of the following conditions apply:
     - Design wind speed is 110 mph or less (not in a Special Wind Region), and
     - The dwelling is not located on the top half of a tall hill.
   - The solar array displaces roof live loads (temporary construction loads) that the roof was originally designed to carry.
   - The Structural Technical Appendix provides additional information about analysis assumptions.
The site auditor should verify the following:

1. No visually apparent disallowed rafter holes, notches and truss modifications as shown above.
2. No visually apparent structural decay or un-repaired fire damage.
3. Roof sag, measured in inches, is not more than the rafter or ridge beam length in feet divided by 20.

Rafters that fail the above criteria should not be used to support solar arrays unless they are first strengthened.

---

**Figure 1. Roof Visual Structural Review (Contractor’s Site Audit) of Existing Conditions.**

**Figure 2. Sample Solar Panel Array and Anchor Layout Diagram (Roof Plan).**
Figure 3. Typical Anchor with Lag Screw Attachment.
This document has two sections. Neither section is all-inclusive as this document is simply a tool to aid the inspection process.

SECTION 1 – Field Inspection Guide: The purpose of this section is to give the field inspector a single-page reminder of the most important items in a field inspection.

SECTION 2 – Comprehensive Reference: This reference details items that may be relevant in the field inspection of rooftop PV systems that comply with the comprehensive or simplified versions of the “Solar PV Standard Plan.” Not all items outlined in this section are relevant to each PV system. This inspection reference details most of the issues that relate to the PV system during the inspection process.

All California Electrical Code (CEC), California Residential Code (CRC), California Building Code (CBC) and California Fire Code (CFC) references are to the 2016 versions unless otherwise noted.
SECTION 1: Field Inspection Guide for Rooftop Photovoltaic (PV) Systems

Standard Plan

Make sure all PV system AC/DC disconnects and circuit breakers are in the open position and verify the following.

1. All work done in a neat and workmanlike manner (CEC 110.12).
2. PV module model number, quantity and location according to the approved plan.
3. Array mounting system and structural connections according to the approved plan.
4. Roof penetrations flashed/sealed according to the approved plan.
5. Array exposed conductors are properly secured, supported and routed to prevent physical damage.
6. Conduit installation according to CRC R331.3 and CEC 690.4(F).
7. Firefighter access according to approved plan.
8. Roof-mounted PV systems have the required fire classification (CBC 1505.9 or CRC R902.4).
9. Grounding/bonding of rack and modules according to the manufacturer’s installation instructions that are approved and listed.
10. Equipment installed, listed and labeled according to the approved plan (e.g., PV modules, DC/DC converters, combiners, inverters, disconnects, load centers and electrical service equipment).
11. For grid-connected systems, inverter is marked “utility interactive.”
12. For ungrounded inverters, installation complies with CEC 690.35 requirements.
13. Conductors, cables and conduit types, sizes and markings according to the approved plan.
14. Overcurrent devices are the type and size according to the approved plan.
15. Disconnects according to the approved plan and properly located as required by the CEC.
16. Inverter output circuit breaker is located at opposite end of bus from utility supply at load center and/or service panelboard (not required if the sum of the inverter and utility supply circuit breakers is less than or equal to the panelboard bus rating).
17. PV system markings, labels and signs according to the approved plan.
18. Connection of the PV system to the grounding electrode system according to the approved plan.
19. Access and working space for operation and maintenance of PV equipment such as inverters, disconnecting means and panelboards (not required for PV modules) (CEC 110.26).
SECTION 2: Comprehensive Inspection Reference

GENERAL
1. Module manufacturer, make, model and number of modules match the approved plans. (CBC 107.4)
2. DC PV modules are listed to UL 1703. Ac modules are listed to UL 1703 and UL 1741. (CEC 110.3, 690.4 & CBC 1509.7.4 & CRC R908.1.5)
3. Modules are attached to the mounting structure according to the manufacturer’s instructions and the approved plans. (CEC 110.3[B], CBC 107.4 & CRC R908.1.4)
4. Roof penetrations/attachments are properly flashed. (CBC Chapter 15 & 2012 CRC Chapter 9)
5. Rooftop systems are designed in accordance with the CBC. (CBC 1509.7 & CRC R908.1)
6. Roof access points, paths and clearances need to comply with the CFC. (CFC 605.11.3.1 - 605.11.3.3.3, CRC R331.4.1 through R331.4.2.4)
7. PV installation shall comply with requirements of the standard plan.
8. PV system operating at 80 volts or greater shall be protected by a listed DC arc fault protection. (CEC 690.11)
9. All work done in a neat and workmanlike manner. (CEC 110.12)

ELECTRICAL REQUIREMENTS

PV Array Configuration
10. DC modules are properly marked and labeled. (CEC 110.3, 690.4[D] & 690.51)
11. AC modules are properly marked and labeled. (CEC 110.3, 690.4[D] & 690.52)
12. PV modules are in good condition (i.e., no broken glass or cells, no discoloration, frames not damaged, etc.). (CEC 110.12[B])
13. Residential one and two family dwelling limited to maximum PV system voltage of 600 volts. (CEC 690.7)

Bonding and grounding
14. A complete grounding electrode system is installed. (CEC 690.47[A] & [B])
15. Modules are bonded and grounded in accordance with the manufacturer’s installation instructions, that are listed and approved, using the supplied hardware or listed equipment specified in the instructions and identified for the environment. (CEC 690.43 & 110.3[B])
16. Racking systems are bonded and grounded in accordance with the manufacturer’s installation instructions, that are listed and approved, using the supplied hardware or listed equipment specified in the instructions and identified for the environment. (CEC 690.43 & 110.3[B])
17. Properly sized equipment grounding conductor is routed with the circuit conductors. (CEC 690.45, 250.134[B] & 300.3[B])
18. AC and DC grounding electrode conductors are properly connected as required by code. Separate electrodes, if used, are bonded together. (CEC 690.47, 250.50 & 250.58)
19. Bonding fittings are used on concentric/eccentric knockouts with metal conduits for circuits over 250 volts. (CEC 250.97) (see also exceptions 1 through 4)

20. Bonding fittings are used for ferrous metal conduits enclosing grounding electrode conductors. (CEC 250.64[E])

**PV Source/output Circuit Conductor Management**

21. Cables are secured by staples, cable ties, straps, hangers or similar fittings at intervals that do not exceed 4.5 feet. (CEC 334.30 & 338.12[A][3])

22. Cables are secured within 12 inches of each box, cabinet, conduit body or other termination. (CEC 334.30 & 338.12[A][3])

23. Cable closely follows the surface of the building finish or of the running boards. (CEC 690.4[F] & CFC 605.11.2 & CRC R331.3) NOTE: see Section 12 below for additional requirements on routing of conductors for fire fighter safety concerns.

24. Exposed single conductors, where subject to physical damage, are protected. (CEC 230.50[B] & 300.5[D])

25. Exposed single conductors used for ungrounded systems are listed and identified as “PV wire.” (CEC 690.35[D][3]) For other conductor requirements for ungrounded systems, see CEC 690.35(D).

**Conductors**

26. Exposed single conductor wiring is a 90°C, wet rated and sunlight resistant type USE-2 or approved/listed PV wire. (CEC 690.31[B] & 110.2) If the wiring is in a conduit, it is 90°C, wet rated type RHW-2, THWN-2, or XHHW-2. (CEC 310.15)

27. Conductor insulation is rated at 90°C to allow for operation at 70°C+ near modules. (CEC 310.15)

28. Grounded conductor is identified white or gray. (CEC 200.6)

29. Open conductors are supported, secured and protected. (CEC 338.12[A][3] & 334.30)

30. Conductors are not in contact with the roof surface. (CEC 334.30)

31. DC conductors inside a building are in a metal raceway or MC metal-clad cable that complies with 250.118(10), or metal enclosures. (CEC 690.31[E])

32. DC wiring methods shall not be installed within 25cm (10”) of the roof decking or sheathing except where directly below the roof surface covered by the PV modules and associated equipment. (CEC 690.31[E][1])

33. If more than one nominal voltage system conductor is installed in the raceway, permanent identification and labeling is required. (CEC 200.6[D] & 210.5[C])

34. For underground conductor installations, the burial depth is appropriate and warning tape is in place. (CEC 300.5[D][3] & Table 300.5)

35. Aluminum is not placed in direct contact with concrete. (CEC 250.120[B] & 110.11)

36. PV circuit and premises wiring is separated. (CEC 690.4[B])

37. PV system conductors shall be grouped and identified. (CEC 690.4[B])
Overcurrent Protection

38. Overcurrent protection devices (OCPD) in the DC circuits are listed for DC operation. (CEC 110.3[A], [B] & 690.9[D])

39. Overcurrent protection devices shall be provided per the approved plans. (CEC 690.9[A])

40. Combiner box is listed to UL 1741.

41. PV output OCPD is located at the opposite end of the bus from the feeder connection, unless otherwise approved. (CEC 705.12[D][7])

Electrical Connections

42. Crimp terminals are listed and installed using a listed tool specified for use in crimping those specific crimps. (CEC 110.3[B] & 110.14)

43. Pressure terminals are listed for the environment and tightened to manufacturer recommended torque specifications. (CEC 110.11, 110.3[B] & 110.14)

44. Connectors are listed for the voltage of the system and have appropriate temperature and ampere ratings. (CEC 110.3[B] & 110.14)

45. Twist-on wire connectors are listed for the environment (i.e., wet, damp, direct burial, etc.) and installed per manufacturer’s instructions. (CEC 110.11, 110.3[B], 110.14 & 300.5[B])

46. Power distribution blocks are listed. (CEC 690.4 & 2011 NEC 314.28[E])

47. Terminals containing more than one conductor are listed for multiple conductors. (CEC 110.14[A] & 110.3[B])

48. Connectors and terminals used other than class B and C stranded conductors (fine stranded conductors) are listed and identified for use with specific conductor class or classes.. (CEC 110.14[A] & 110.3[B])

49. Connectors that are readily accessible and operating at over 30 volts require a tool for opening. (CEC 690.33[C])

50. All connectors are fully engages, tight and secure. (CEC 110.3[B] & 110.12)

51. Wiring and connections of inverters, PV source circuits, etc., and all interconnections are performed by qualified personnel. (CEC 690.4[E])

Disconnects

52. Disconnects used in DC circuits are listed for DC operation and located as allowed by the AHJ. (CEC 110.3)

53. Disconnects are installed for all current carrying conductors of the PV source. (CEC 690.13 - 690.14 & 690.35)

54. Disconnects are installed for the PV equipment. NOTE: For inverters and other equipment that are energized from more than one source, the disconnecting means must be grouped and identified per AHJ’s requirements. (CEC 690.15)

55. Disconnects and overcurrent protection are installed for all ungrounded conductors in ungrounded PV power systems. (CEC 240.15 & 690.35)

56. Where connectors are used as disconnecting means, they shall be used in accordance with CEC 690.33.E (CEC 690.33.E & 690.17)
Inverters

57. Inverters are listed to UL 1741. (CEC 690.4[D]) NOTE: grid-tied system inverters need to be identified for use in interactive power systems.

58. Point of connection is at a dedicated breaker or disconnect. (CEC 705.12[D][1])

59. Where a back-fed breaker is used as a utility interconnection means, the breaker is not marked “line and load.” (CEC 110.3[B], 705.12[D][5])

60. Listed AC and DC disconnects and overcurrent protection are grouped and identified. (CEC 690.15)

61. No multiwire branch circuits are installed where single 120-volt inverters are connected to 120/240-volt load centers. (CEC 690.10[C])

62. The barrier is reinstalled between the AC, DC wiring and communication wires. (CEC 110.3[B] & 110.27)

 Signs and Labels

63. All interior and exterior DC conduit, enclosures, raceways, cable assemblies, junction boxes, combiner boxes and disconnects are marked. (CFC 605.11.1, CEC 690.31[E][3], CEC 690.31[E][4], 690.17 & 690.53 & CRC R331.2)

64. The markings on the conduits, raceways and cable assemblies are every 10 feet, within one foot of all turns or bends and within one foot above and below all penetrations of roof/ceiling assemblies, walls and barriers. (CFC 605.11.1.4, CRC R331.2.4, CEC 690.31[E][3] & CEC 690.31[E][4])

65. Marking is placed adjacent to the main service disconnect in a location clearly visible from where the disconnect is operated. (CFC 605.11.1.3 & CRC R331.2.3)

66. The markings say “WARNING: PHOTOVOLTAIC POWER SOURCE” and have 3/8-inch (9.5 mm) minimum-sized white letters on a red background. The signs are made of reflective weather resistant material. (CFC 605.11.1.1, 605.11.1.2 & CRC R331.2.1 - R331.2.2 & CEC 690.31[E][3] & 690.31[E][4])

67. Where PV circuits are embedded in built-up, laminate or membrane roofing materials in roof areas not covered by PV modules and associated equipment, the location of circuits shall be clearly marked. (CEC 690.4[F])

68. Required labels shall be permanent and suitable for the environment. The following labels are required as applicable.

</table>
FIRE SAFETY REQUIREMENTS

1. Rooftop-mounted PV panels and modules have the proper fire classification rating. (CBC 1509.7.2 & CRC R908.1.2)

2. Conduit, wiring systems and raceways for photovoltaic circuits are located as close as possible to the ridge, hip or valley and from the hip or valley as directly as possible to an outside wall to reduce trip hazards and maximize ventilation opportunities. (CFC 605.11.2 & CRC R331.3)

3. Conduit runs between sub arrays and to DC combiner boxes are installed in a manner that minimizes total amount of conduit on the roof by taking the shortest path from the array to the DC combiner box. (CFC 605.11.2 & CRC R331.3)

4. DC Combiner Boxes are located so that conduit runs are minimized in the pathways between arrays. (CFC 605.11.2 & CRC 331.3)

5. DC wiring in enclosed spaces in buildings is installed in metallic conduit or raceways. Conduit runs along the bottom of load bearing members. (CFC 605.11.2 & CEC 690.4[F] & CRC R331.3)

6. All roofs have an access point that does not place ground ladders over openings such as windows or doors, are located at strong points of building construction, and in locations where the access point does not conflict with overhead obstructions such as tree limbs, wires, or signs. (CFC 605.11.3.1 & CRC R331.3)

7. Roofs with slopes greater than 2:12 have solar panel layouts with access pathways that comply with approved roof plan that meet the following criteria: (some exceptions apply, see diagrams in the California Solar Permitting Guidebook)
   A. Hip Roofs: Panels/modules are located so that there is a 3-foot wide clear access pathway from the eave to the ridge on each roof slope where panels/modules are located. (CFC 605.11.3.2.1 & CRC R331.4.2.1)
   B. Hips and Valleys: If panels/modules are placed on both sides of a hip or valley they are located no closer than 18 inches to a hip or valley. If the panels are located on only one side of a hip or valley that is of equal length, then the panels can be placed directly adjacent to the hip or valley. (CFC 605.11.3.2.3 & CRC R 331.4.2.3)
   C. Single Ridges: Panels/modules are located so that there are two 3-foot wide access pathways from the eave to the ridge on each roof slope where there are panels/modules installed. (CFC 605.11.3.2.2 & CRC R331.4.2.2)
   D. Ridges: Panels/modules are located no higher than 3 feet from the top of the ridge in order to allow for fire department smoke ventilation operations. (CFC605.11.3.2.4 & CRC R331.4.2.4)
   E. Access pathways are located at a structurally sound location capable of supporting the load of fire fighters accessing the roof. (CFC 605.11.3.2.1 & CRC R331.4.2.1)
